

Get Prepared for Emergencies and Natural Disasters with AgLearn

It's time for National Preparedness and AgLearn joins the USDA in its theme, "Personal Preparedness". Are you and your family ready in case of an emergency? Check out these tips on how you can become better prepared and get started today!

Emergency and Disaster Preparedness

This course provides instruction on emergency response, safety, reporting, and evacuation of company facilities and work areas in the event of a natural disaster, fire, bomb threat, or other emergency. Learners will be able to recall the actions to take in specific emergency situations, describe the purpose and scope of a workplace violence prevention plan, and identify specific actions to take in the event of a bomb threat.

Emergency Preparedness

This training will provide USDA Washington DC metro area employees with information on what to do during various types of emergencies that may affect them in the workplace.

Emergency Response in the Workplace

This course provides the learner with basic information on procedures that cover onsite emergencies such as an accidental release or spill of a hazardous chemical, fire emergencies, explosions, bomb threats, threats to security, or personal injuries.

Emergency Situations While Driving

This course helps you to successfully handle emergencies which requires knowledge of how to prevent them when possible and how to handle them when they do happen. Understanding the typical types of collisions can help you avoid them, knowing how to handle a skid can help you successfully steer out of one, and knowing how to adjust your driving to hazardous weather conditions can help you prevent or avoid weather-related emergencies. It is also important that you know how to safely handle a breakdown.

First Aid: Medical Emergencies

Medical emergencies can occur at any time but may be hidden because of injuries suffered in an accident, or an accident may trigger a medical emergency such as a heart attack, stroke, or seizure. Learner objectives are to describe how to respond appropriately to a medical emergency, and recall the signs, symptoms, and first aid treatment of the following medical emergencies: choking, poisoning, heart attacks, respiratory distress, strokes, seizures, and diabetic shock.

NFPA 1600 Disaster/Emergency Management

The NFPA 1600 standard is a description of the basic criteria for a comprehensive program that addresses disaster recovery, emergency management, and business continuity. NFPA 1600 is considered by many to be an excellent benchmark for continuity and emergency planners in both the public and private sectors. This course will provide you with an understanding of the basic criteria for developing a comprehensive program that addresses disaster recovery and emergency management in accordance with the NFPA 1600 standard.
